# Revenue Measures

## Total Revenue

```
SUM ( Sales[SalesAmount] )
```

Base revenue aggregation across the current filter context.

## Revenue LY

```
CALCULATE ( [Total Revenue], SAMEPERIODLASTYEAR ( 'Date'[Date] ) )
```

Same period last year, for YoY comparisons.

## Revenue YTD

```
TOTALYTD ( [Total Revenue], 'Date'[Date] )
```

Year-to-date cumulative revenue.

## Revenue MTD

```
TOTALMTD ( [Total Revenue], 'Date'[Date] )
```

Month-to-date cumulative revenue.

## Net Revenue (Excl. Returns)

```
CALCULATE ( [Total Revenue], Sales[OrderType] <> "Return" )
```

Revenue excluding returned orders — use for a 'true' sales view.

# Profit Measures

## Total Profit

```
SUMX ( Sales, Sales[SalesAmount] - Sales[COGS] )
```

Row-level profit summed across all transactions.

## Gross Profit

```
[Total Revenue] - [Total COGS]
```

Standard gross profit using pre-aggregated measures.

## Operating Profit

```
[Gross Profit] - [Total Operating Expenses]
```

Profit after operating costs, before interest/tax.

## Profit LY

```
CALCULATE ( [Total Profit], SAMEPERIODLASTYEAR ( 'Date'[Date] ) )
```

Prior-year profit for comparison.

## Cumulative Profit YTD

```
TOTALYTD ( [Total Profit], 'Date'[Date] )
```

Running profit total from the start of the fiscal year.

# Margin Measures

## Gross Margin %

```
DIVIDE ( [Gross Profit], [Total Revenue] )
```

Core profitability ratio — always use *DIVIDE* to avoid /0 errors.

## Net Margin %

```
DIVIDE ( [Net Income], [Total Revenue] )
```

Bottom-line profitability as a percentage of revenue.

## Contribution Margin %

```
DIVIDE ( [Total Revenue] - [Total Variable Cost], [Total Revenue] )
```

Margin after variable costs only — useful for break-even analysis.

## Margin Variance vs LY (pp)

```
[Gross Margin %] - CALCULATE ( [Gross Margin %], SAMEPERIODLASTYEAR ( 'Date'[Date] ) )
```

Percentage-point change in margin year over year.

## Margin by Category Rank

```
RANKX ( ALL ( Product[Category] ), [Gross Margin %], , DESC )
```

Ranks categories by profitability, not just revenue.

# Growth Measures

## Revenue Growth % YoY

```
DIVIDE ( [Total Revenue] - [Revenue LY], [Revenue LY] )
```

Standard year-over-year growth percentage.

## Revenue Growth % MoM

```
VAR CurrM = [Total Revenue]
VAR PrevM = CALCULATE ( [Total Revenue], DATEADD ( 'Date'[Date], -1, MONTH ) )
RETURN DIVIDE ( CurrM - PrevM, PrevM )
```

Month-over-month growth using DATEADD.

## CAGR (3-Year)

```
VAR EndVal = [Total Revenue]
VAR StartVal = CALCULATE ( [Total Revenue], DATEADD ( 'Date'[Date], -3, YEAR ) )
RETURN DIVIDE ( EndVal, StartVal ) ^ ( 1/3 ) - 1
```

Compound annual growth rate over a 3-year window.

## Customer Growth %

```
VAR CurrC = DISTINCTCOUNT ( Sales[CustomerID] )
VAR PrevC = CALCULATE ( DISTINCTCOUNT ( Sales[CustomerID] ), SAMEPERIODLASTYEAR (
'Date'[Date] ) )
RETURN DIVIDE ( CurrC - PrevC, PrevC )
```

Growth in the active customer base, not just revenue.

## Growth Acceleration Flag

```
VAR ThisGrowth = [Revenue Growth % YoY]
VAR PriorGrowth = CALCULATE ( [Revenue Growth % YoY], DATEADD ( 'Date'[Date], -1, QUARTER
) )
RETURN IF ( ThisGrowth > PriorGrowth, "Accelerating", "Decelerating" )
```

Flags whether growth is speeding up or slowing down quarter over quarter.

# Rolling Window Measures

## Rolling 3-Month Average

```
AVERAGEX ( DATESINPERIOD ( 'Date'[Date], MAX ( 'Date'[Date] ), -3, MONTH ), [Total Revenue] )
```

*Smooths short-term volatility using a trailing 3-month average.*

## Rolling 12-Month Total

```
CALCULATE ( [Total Revenue], DATESINPERIOD ( 'Date'[Date], MAX ( 'Date'[Date] ), -12, MONTH ) )
```

*Trailing twelve months (TTM) — a common exec-level KPI.*

## Rolling 7-Day Average

```
AVERAGEX ( DATESINPERIOD ( 'Date'[Date], MAX ( 'Date'[Date] ), -7, DAY ), [Total Revenue] )
```

*Useful for high-frequency retail/e-commerce trend smoothing.*

## Rolling Std Dev (3-Month)

```
STDEVX.P ( DATESINPERIOD ( 'Date'[Date], MAX ( 'Date'[Date] ), -3, MONTH ), [Total Revenue] )
```

*Measures recent volatility — useful for anomaly-detection style visuals.*

## Moving Range (Max - Min, 6-Month)

```
VAR Period = DATESINPERIOD ( 'Date'[Date], MAX ( 'Date'[Date] ), -6, MONTH )
RETURN MAXX ( Period, [Total Revenue] ) - MINX ( Period, [Total Revenue] )
```

*Shows the spread between best and worst month in a trailing window.*

# Forecast Measures

## Linear Trend Forecast (Next Period)

```
VAR n = COUNTROWS ( ALL ( 'Date'[Month] ) )
VAR avgX = ( n + 1 ) / 2
VAR avgY = AVERAGEX ( ALL ( 'Date'[Month] ), [Total Revenue] )
RETURN avgY
```

Simplified trend baseline — for production forecasting, pair with Power BI's built-in Analytics pane or Python/R visuals.

## Forecast vs Actual Variance

```
[Total Revenue] - [Forecast Revenue]
```

Compares actuals against a forecast measure/table loaded from a planning process.

## Forecast Accuracy %

```
1 - DIVIDE ( ABS ( [Total Revenue] - [Forecast Revenue] ), [Forecast Revenue] )
```

Standard forecast accuracy calculation used in S&OP reporting.

## Run-Rate Annualized

```
[Revenue MTD] * 12
```

Simple annualized run-rate projection based on month-to-date pace.

## Days Remaining in Period

```
VAR TotalDays = DATEDIFF ( STARTOFMONTH ( MAX ( 'Date'[Date] ) ), ENDOFMONTH ( MAX ( 'Date'[Date] ) ), DAY ) + 1
VAR ElapsedDays = DATEDIFF ( STARTOFMONTH ( MAX ( 'Date'[Date] ) ), MAX ( 'Date'[Date] ), DAY ) + 1
RETURN TotalDays - ElapsedDays
```

Supporting measure for run-rate and pacing calculations.

# Variance Measures

## Budget Variance (\$)

```
[Total Revenue] - [Budget Amount]
```

*Absolute variance between actual and budgeted revenue.*

## Budget Variance (%)

```
DIVIDE ( [Total Revenue] - [Budget Amount], [Budget Amount] )
```

*Percentage variance — the more commonly presented view for stakeholders.*

## Favorable/Unfavorable Flag

```
IF ( [Budget Variance ($)] >= 0, "Favorable", "Unfavorable" )
```

*Text flag for conditional formatting in tables/matrices.*

## Variance vs Prior Forecast

```
[Total Revenue] - [Forecast Revenue]
```

*Distinguishes budget variance from forecast variance — these answer different questions.*

## Cumulative Variance YTD

```
TOTALYTD ( [Budget Variance ($)], 'Date'[Date] )
```

*Running total of variance since the start of the fiscal year.*

# Customer KPI Measures

## Active Customers

```
DISTINCTCOUNT ( Sales[CustomerID] )
```

Unique customers transacting within the current filter context.

## New Customers

```
CALCULATE ( DISTINCTCOUNT ( Sales[CustomerID] ), FILTER ( Customer,
Customer[CustomerSince] >= MIN ( 'Date'[Date] ) ) )
```

Customers whose first transaction falls inside the selected period.

## Customer Retention Rate

```
VAR StartCust = CALCULATE ( DISTINCTCOUNT ( Sales[CustomerID] ), SAMEPERIODLASTYEAR (
'Date'[Date] ) )
VAR RetainedCust = CALCULATE ( DISTINCTCOUNT ( Sales[CustomerID] ), INTERSECT ( VALUES (
Sales[CustomerID] ), CALCULATETABLE ( VALUES ( Sales[CustomerID] ), SAMEPERIODLASTYEAR (
'Date'[Date] ) ) ) )
RETURN DIVIDE ( RetainedCust, StartCust )
```

Percentage of last year's customers who also purchased this year.

## Average Revenue per Customer

```
DIVIDE ( [Total Revenue], [Active Customers] )
```

Revenue efficiency per customer — pairs well with CLV analysis.

## Repeat Purchase Rate

```
VAR CustWithMultipleOrders = CALCULATE ( DISTINCTCOUNT ( Sales[CustomerID] ), FILTER (
VALUES ( Sales[CustomerID] ), CALCULATE ( DISTINCTCOUNT ( Sales[OrderID] ) ) >= 2 ) )
RETURN DIVIDE ( CustWithMultipleOrders, [Active Customers] )
```

Percentage of customers who ordered more than once.

# Inventory KPI Measures

## Ending Inventory Value

```
SUMX ( VALUES ( Product[ProductKey] ), [Ending Stock Qty] * RELATED ( Product[UnitCost] ) )
```

Total value of inventory on hand at period end.

## Inventory Turnover

```
DIVIDE ( [Total COGS], [Average Inventory Value] )
```

How many times inventory cycles through in the period.

## Days of Inventory On Hand

```
DIVIDE ( [Average Inventory Value], [Total COGS] ) * 365
```

Average number of days inventory sits before being sold.

## Stockout Rate

```
DIVIDE ( [Stockout Events], [Total Demand Events] )
```

Percentage of demand that couldn't be fulfilled from available stock.

## Reorder Alert Count

```
CALCULATE ( COUNTROWS ( Product ), FILTER ( Product, [Ending Stock Qty] <= Product[ReorderPoint] ) )
```

Number of products currently at or below their reorder point.

# Financial KPI Measures

## Current Ratio

DIVIDE ( [Total Current Assets], [Total Current Liabilities] )

Core liquidity ratio for balance sheet health.

## Quick Ratio

DIVIDE ( [Total Current Assets] - [Total Inventory], [Total Current Liabilities] )

Stricter liquidity test excluding inventory.

## Debt-to-Equity Ratio

DIVIDE ( [Total Debt], [Total Equity] )

Financial leverage indicator.

## EBITDA Margin %

DIVIDE ( [EBITDA], [Total Revenue] )

Operating profitability before non-cash and financing items.

## Days Sales Outstanding (DSO)

DIVIDE ( [Accounts Receivable], [Total Revenue] ) \* 365

Average number of days to collect payment after a sale.
